

# Food Security Leveraging Data and Technology Innovation

Lesly Goh  
Senior Technology Advisor  
June 23, 2023

# Agriculture is the **primary livelihood** for much of the world's population, **particularly the poor**

Agriculture accounts for one third of global GDP<sup>1</sup>

60% of the world's poor depend on agriculture for their livelihoods

Agriculture contributes to 35% of the ASEAN region's employment, of which 60% are smallholder farmers

**Strengthening the incomes of Small Holder Farmers will have massive poverty reduction impact**

Through food system transformation, these SDGs will be met

Agri-food systems directly impact 5 of the 17 SDGs, playing an integral role in eliminating poverty and hunger, strengthening jobs and economic growth, and improved use of natural resources

<sup>1</sup> As of 2014. [www.devex.com/news/sponsored/opinion-how-to-address-the-impact-of-covid-19-on-global-food-systems-96892](http://www.devex.com/news/sponsored/opinion-how-to-address-the-impact-of-covid-19-on-global-food-systems-96892)

# Current and emerging challenges are massive!

How do we feed 10 billion people...

**TO FEED NEARLY**

...without using more land...

**WE NEED TO PREVENT AGRICULTURE FROM EXPANDING**

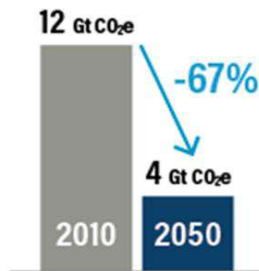

we currently use **~50%** of the world's vegetated land for agriculture

**TO SAVE AN AREA OF FORESTS NEARLY 2X** the size of India

... while lowering emissions

**WE CAN LOWER EMISSIONS**

**WITH INNOVATIVE TECHNOLOGY LIKE**

Improved rice cultivation and livestock systems, reduced food loss and waste, agroforestry, landscape management and restoration

... while improving climate resilience and without contributing to further water insecurity

... while improving nutrition and building human capital

...and lifting the poor who work in the food system out of poverty?

# Key technologies can provide significant benefits to smallholder farmers

## Key Benefits

Biotechnology

Improved crop yields, reduced vulnerability to environmental issues, increased nutritional qualities of food crops and reduced dependence on fertilizers

Mobile Phones

Allow farmers to gain access to vital information about prices of crops and instant weather information to properly manage crops. They also serve as the main distribution channel for financial products such as loans, insurance, savings and a means to make payments

Internet / Connectivity

Brings new information resources and can open new communication channels for rural communities. Other benefits include increased efficiency, less duplication of activities, and global access to information

Data Analytics & AI / ML

Enables farmers to manage key resources including seed and fertilizers, while increasing productivity. The tremendous amount of data generated can also be used with AI / ML techniques to make informed decisions and predictions

## Key Benefits

IoT Software & Hardware

Enables the creation of real-time monitoring systems, which allows farmers to quickly respond to any significant changes in weather, light, humidity, as well as the health of each crop or soil in the field

Robotics & Automation

Robots automate slow, repetitive tasks for farmers, allowing them to focus more on improving overall production yields

Blockchain / DLT

Can be used to improve the traceability of crops across the agriculture supply chain, thereby providing transparency throughout the process and potentially reducing transaction costs

# Transformative, interconnected pathways to change

## Healthy People

1. Better diets
2. One Health/Prevention of zoonotic diseases
3. Improved food safety

## Healthy Planet

4. Reduction in GHGs
5. Reduction in pollution
6. Improved land, water and food loss and waste (FLW) management

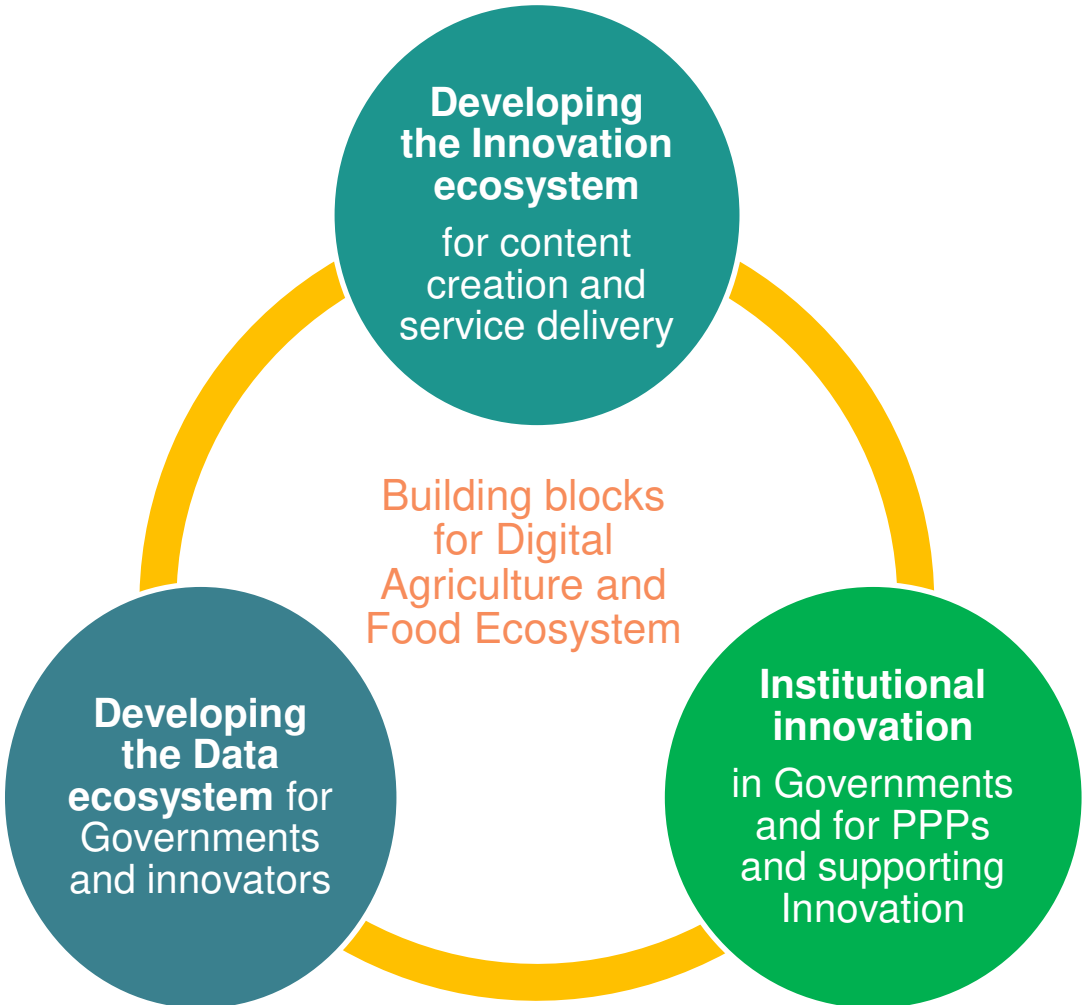

## Healthy Economies

7. Promotion of productivity growth
8. Increased job creation
9. Maintaining trade flows

# FS2030 Refined Theory of Change

## Food Security: Digital transformation of agri- food systems requires addressing three fronts

Increase **Farmer Incomes** through greater value-addition and improved profitability

Reduce **Food Prices** through increasing productivity and lowering trade barriers

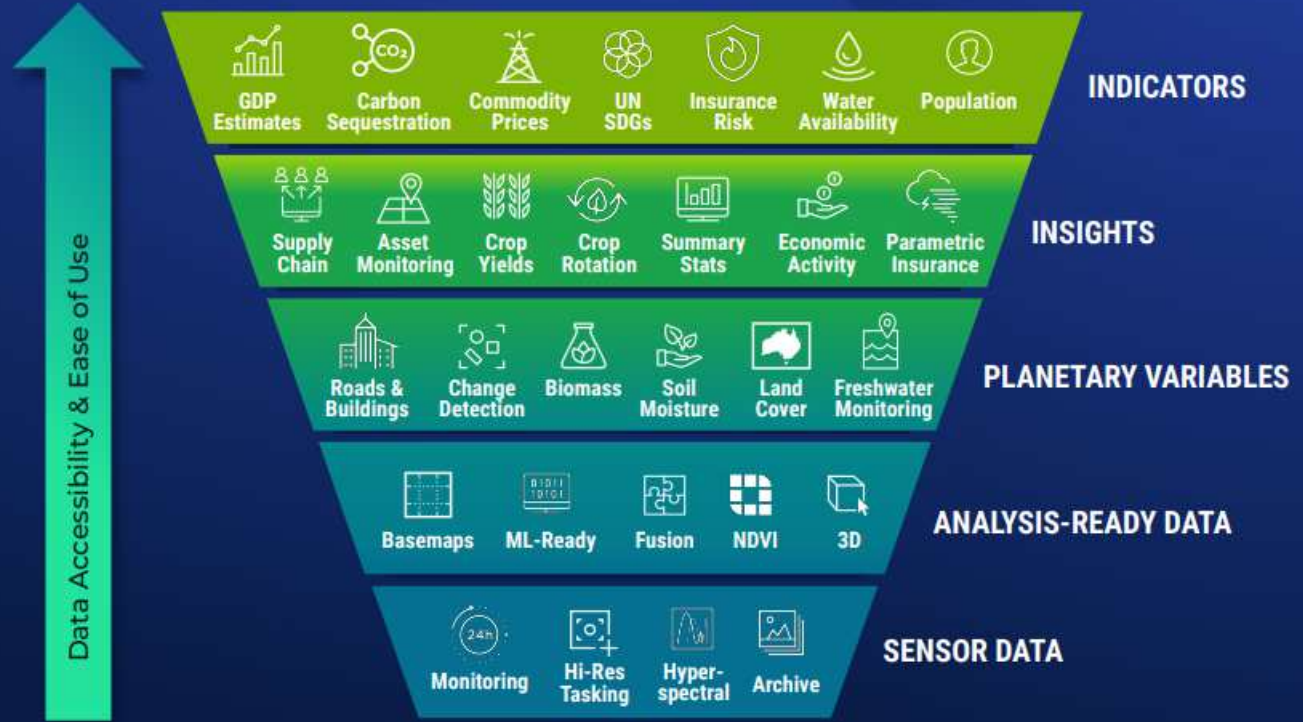

Increase **Nutrition** through diversifying domestic production and quality of nutritious foods

Enhance **Sustainability** through “greening of agriculture” (reducing emissions and carbon footprint)

# The Data Pyramid

Planet is building a platform on top of our proprietary data, for partners and customers

Each step is designed to make the data easier to use, shorten time to value, and increase addressable market opportunity

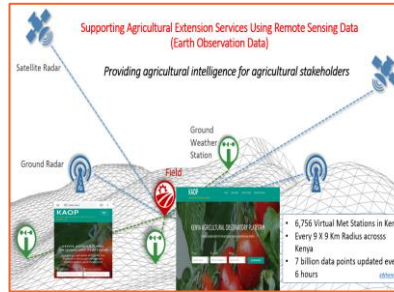

# Key Data and Digital interventions in Kenya

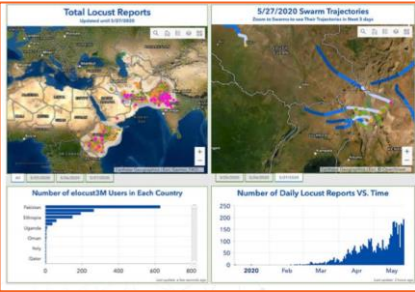

## Kenya Big Data Center

## Micro Weather Observatory

## Desert Locusts warning and response

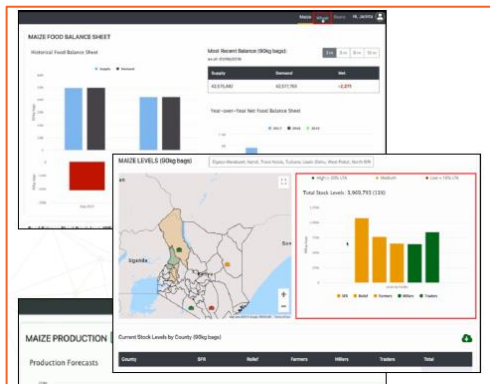

## Farmers Digital Registry and Farm Geotagging

1.1. million Farmers Digital Registry

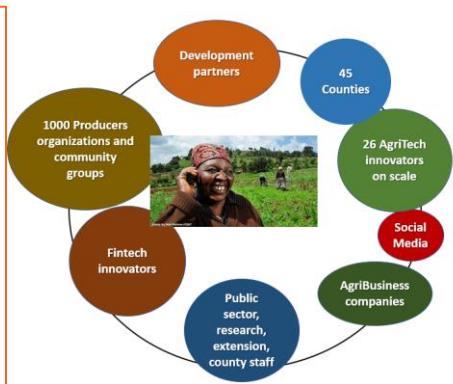

A digital database including geo tagging of the farms

Shape	Point
County	NAROK
Ward	KEES/ONDOKE
Beneficiary	I am a CGIAR/NG member
Name_of_fm	methemphole cow milk cing oletharo
Name_of_fm_1	Lucky nassu
ID_number	31930430
ID_number_1	Female
Phone_no_1	703223758
Gender	Female
Age_brade	18-35
Product_1d	

## Digital Food Balance Sheet

## One Million Farmers Platform

## Digital e-voucher system

## Digitizing Producer Organizations

## ASEAN-BAC Food Security Working Group

### Targeted outputs by Sep 2023

- **Recommendations for key policies and initiatives that support Food Security priorities and objectives**, with the Inclusive Closed-Loop as legacy initiative
- **Alignment on Single Narrative approach that enables each ASEAN member to create tailored policies and strategies** that increase productivity, create better markets, improve distribution and access, and ensure food safety, quality, and nutrition
- **Articulation of Inclusive Closed-Loop model as an effective partnership ecosystem model** for developing a farmer-based food industry
